Most of them become full-fed towards the end of April or early in May, when they bury themselves and turn to pupae, the moths emerging towards the end of June or early in July. Remedial Measures. In gardens, stirring the surface frequently during the winter and spring destroys some of the larvae, and exposes others to Fig. XXI.--Larvae Of Great Yellow Undkrwing Moth. the attack of birds. Starlings are particularly fond of them. Handpicking the larvae is still more effective. I have entirely cleared them out of my own garden in this way. Fresh gas lime well worked into the land in the autumn has been tried with some amount of success. THE SILVER Y MOTH. Plusia gamma. Linn. Although this moth rarely commits any serious damage, I am giving a short notice of it, as it has been forwarded by...
