

Extreme Low-Power Mixed Signal IC Design: Subthreshold Source-Coupled Circuits (Paperback)

Filesize: 2.61 MB

Reviews

Great e book and helpful one. It really is written in straightforward terms and not hard to understand. You can expect to like how the blogger wrote this book.

(Hudson Christiansen)

EXTREME LOW-POWER MIXED SIGNAL IC DESIGN: SUBTHRESHOLD SOURCE-COUPLED CIRCUITS (PAPERBACK)

To get **Extreme Low-Power Mixed Signal IC Design: Subthreshold Source-Coupled Circuits (Paperback)** PDF, you should access the web link listed below and download the ebook or get access to additional information which are highly relevant to **EXTREME LOW-POWER MIXED SIGNAL IC DESIGN: SUBTHRESHOLD SOURCE-COUPLED CIRCUITS (PAPERBACK)** book.

Springer-Verlag New York Inc., United States, 2014. Paperback. Book Condition: New. 2010 ed.. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Design exibility and power consumption in addition to the cost, have always been the most important issues in design of integrated circuits (ICs), and are the main concerns of this research, as well. Energy Consumptions: Power dissipation (P) and energy consumption are - diss pecially importantwhen there is a limited amountof power budgetor limited source of energy. Very common examples are portable systems where the battery life time depends on system power consumption. Many different techniques have been - veloped to reduce or manage the circuit power consumption in this type of systems. Ultra-low power (ULP) applications are another examples where power dissipation is the primary design issue. In such applications, the power budget is so restricted that very special circuit and system level design techniquesare needed to satisfy the requirements. Circuits employed in applications such as wireless sensor networks (WSN), wearable battery powered systems [1], and implantable circuits for biol- ical applications need to consume very low amount of power such that the entire system can survive for a very long time without the need for changinor recharging battery[2-4]. Using newpowersupplytechniquessuchas energyharvesting[5]and printable batteries [6], is another reason for reducing power dissipation. Devel- ing special design techniques for implementing low power circuits [7-9], as well as dynamic power management (DPM) schemes [10] are the two main approaches to control the system power consumption. Design Flexibility: Design exibility is the other important issue in modern in- graded systems.
